Aperture Beginners Guide

Aperture controls the depth of field or the amount of the image that's sharp. These elements comprise the Exposure Triangle, which is a much more in-depth topic that we explore in depth in this guide. For our purposes here, we tackle aperture and depth of field to help you build a solid understanding of this most fundamental aspect of using light.

A Beginner's Guide to Aperture and Depth of Field

Basically speaking, the aperture is an adjustable hole in the lens, through which light travels into the camera body. The mechanism of the aperture can be related back to the pupil of the human eye. The pupil opens (gets larger), or shrinks (gets smaller) to control the amount of light entering the eye.

Aperture can be defined as the opening in a lens through which light passes to enter the camera. It is an easy concept to understand if you just think about how your eyes work. As you move between bright and dark environments, the iris in your eyes either expands or shrinks, controlling the size of your pupil.

What is Aperture? Understanding Aperture in Photography

As I pointed out in my "Understanding Digital Camera Modes" article, I recommend using "Aperture Priority" mode for beginners (although any other mode works equally well, as long as you know what you are doing). In this mode, you set your lens aperture, while the camera automatically guesses what the right shutter speed should be.

The smaller the number and the more open the aperture, the more light that comes in and the more out of focus the background. The larger the number and the more closed the background, the less light that comes in, and the more in-focus the background. When you're in Aperture mode, you use the scroller on your camera to open and close the aperture.

The aperture is the preferred setting to set first, as it directly influences how much of your scene is in focus. But, if you are looking to create motion blur, then it is second to the shutter speed. Exposure will be much easier if you can memorize the fstop scale. The scale is as follows: f/1.4, f/2, f/2.8, f/4, f/5.6, f/8, f/11, f/16, f/22.
