### Before My Heart Stops: A Memoir - Deseret Book

Your heart rhythm is controlled by electrical pathways in your heart. During cardiac ablation, energy is sent to the area of your heart that has an electrical problem. The energy causes a tiny area of the heart muscle to scar. This stops the electrical problem and allows your heart to beat regularly.

### Cardiac Ablation (Precare) - What You Need to Know

Usually this feeling is caused by an extra beat (premature beat or extrasystole) that happens earlier than the next normal beat, and results in a pause until the next normal beat comes through. People are not usually aware of the early, extra beat, but may be aware of the pause, which follows it (the heart seems to stop).

### PALPITATIONS - a patient's guide - Family Doctor

Sudden cardiac arrest (SCA) is also called sudden cardiac death Sudden cardiac arrest occurs when the heart suddenly stops beating, which stops oxygen-rich blood from reaching the brain and other organs. A person can die from SCA in minutes if it is not treated right away.

It is very unlikely that your heart really stops, but if you have eliminated genuine problems, then perhaps whatever in your subconscious mind is objecting to you switching off and going to sleep may be silenced. Are you a smoker?

### Heart stopping moments before sleep. | Gransnet

Does your heart unexpectedly start to race or pound, or feel like it keeps skipping beats? These sensations are called heart palpitations. For most people, heart palpitations are a once-in-a-blue-moon occurrence. Others have dozens of these heart flutters a day, sometimes so strong that they feel like a heart attack.

Another said, "Are you ok? I've never seen that before." I was confused. "I just passed out. I'm fine. What's going on?" The nurse formerly known as "the one with the paddles" ran out of the room and came back with this: Apparently, when I passed out, my heart stopped beating for about 13 seconds. Weird, right?
