Chapter 11

Autonomic

Study ...

There are two branches or divisions of the autonomic nervous system (ANS): the sympathetic and parasympathetic. Both branches innervate most organs in an arrangement called dual innervation. The parasympathetic division is most active during rest and stimulates digestive activities.

Functions of the
Autonomic Nervous
System □ Some ANS
neurons release
acetylcholine, and
others release
norepinephrine; the
result is excitation in
some cases and
inhibition in others. □

File Type PDF

Chapter 11

Autonomic Nervous System Multiple Choice

ANS neurons that release acetylcholine include (1) all sympathetic and parasympathetic preganglionic neurons, (2) all parasympathetic postganglionic neurons, and (3) a few sympathetic postganglionic neurons. Most sympathetic postganglionic neurons release the neurotransmitter norepinephrine (NE).

In the autonomic nervous system, acetylcholine (ACh) is the neurotransmitter in the preganglionic sympathetic and parasympathetic neurons.

These are shown in Figure 11.2 as the red ACh in the ganglion.

ACh is also the neurotransmitter at the adrenal medulla and serves as the neurotransmitter at all the parasympathetic innervated organs.
