The probability for all the particles to be on one side is $\frac{1}{32}$. $\frac{1}{32}$. This probability is noticeably lower than the $\frac{1}{8}$ $\frac{1}{8}$ result for the four-particle system. The conclusion we can make is that the probability for all the particles to stay in only one part of the system will decrease rapidly as the number of particles increases, and, for instance, the probability for all molecules of gas to ...
