PURPOSE: Denture survival, or the time between the date of a denture's insertion and the date of its renewal for any clinical reason, was assessed in this retrospective study on 353 complete dentures.

## **Clinical performance of complete dentures: a retrospective ...**

A complete denture (also known as a full denture, false teeth or plate) is a removable appliance used when all teeth within a jaw have been lost and need to be prosthetically replaced. In contrast to a partial denture, a complete denture is constructed when there are no more teeth left in an arch, hence it is an exclusively tissue-supported prosthesis.

## **Complete dentures - Wikipedia**

The fabrication of optimal dentures is possible with appropriate prosthetic laboratory techniques along with patients' anatomic and physiologic requirements assessed by a dentist. Objective: The purpose of this study was to evaluate the patient's priority and mean satisfaction scores of the patient and dentist during complete denture therapy.

has worn them will testify to this. Patients experiencing problems with their teeth, often say.... "Doc, wouldn't it be easier just to rip them all out and give me falsies".... Simple answer, "Not on your life!". Obviously when making a new complete denture, we don't have to consider any of the teeth (because there aren't any) which makes the design easier than a partial denture ...

If one thinks of a denture as having three surfaces—occlusal, polished and fit surface—then it becomes easier to decide which of these one should copy or alter as the clinical situation requires. Of course prior to constructing a new prosthesis, the clinician should have a good indication for using this treatment modality based on an accurate diagnosis of the problem and reason for replacement.
