Describing Your Data Frequencies Cross Tabulations And

Cross tabulation is usually performed on categorical data — data that can be divided into mutually exclusive groups. An example of categorical data is the region of sales for a product. Typically, region can be divided into categories such as geographic area (North, South, Northeast, West, etc) or state (Andhra Pradesh, Rajasthan, Bihar, etc).

Cross Tabulation: How It Works and Why ... - Humans of Data

Analyzing Survey Data with Minitab: Frequency Distributions, Cross Tabulation and Hypothesis Testing. Minitab Statistical Software makes it easy to analyze survey data you've collected and answer questions that can affect your business or organization.

Analyzing Survey Data with Minitab: Frequency ...

The basic strategy in loglinear modeling involves fitting models to the observed frequencies in the cross-tabulation of categoric variables. ... Note the shorter notation used here to describe models. ... you need to have at least 5 times the number of cases as cells in your data. For example, if you have a 2x2x3 table, then you need to have 60 ...

Log Linear Models

To describe a single categorical variable, we use frequency tables.To describe the relationship between two categorical variables, we use a special type of table called a cross-tabulation (or “crosstab” for short). In a cross-tabulation, the categories of one variable determine the rows of the table, and the categories of the other variable determine the columns.
