The Distributive Property is an identity used to simplify an equation with parentheses.In general,  $a(b + c) = a \times b + a \times c$ For example,  $5(4+7)$ .You multiply 5 by 4 (you get 20) and then 5 by 7 (you ...

### What is the distributive property? - Answers

Answer. Top Answer. Wiki User Answered . 2014-09-19 12:24:54 ... There are no operators in the question and so the distributive property has no relevance to the question.

### The distributive property combines? - Answers

as for this, the part with the distributive property is only  $2(4x+3)$ . the 7 is added to whatever you get there. so when you distributed the second part, just combine like terms.  $7+2(4x-3) = 7+ 8x-6 = 1 + 8x$ . the other problems are just like this. try them yourself. they are good practices. if you know how to multiply and add, you can do those.

### Distributive Property questions? | Yahoo Answers

Answer. Top Answer. Anonymous Answered . 2020-09-21 19:07:03 ... There are no operators in the question and so the distributive property has no relevance to the question. What does distributive property mean in addition? Addition, by itself, does not have a distributive property.

### What is the Distributive Property of 8x71? - Answers

Distributive Property of Multiplication Over Subtraction: Distributive property of multiplication over subtraction is the same as that incase of addition. However, the only change is that the difference of the individual products is found to arrive at the final answer.

### Distributive Property - Basics, Examples and Important FAQs

Answer: To express the sum of two numbers using distributive property, we factor out the highest common factor (HCF) of the two numbers (i. e. the greatest number that can divide the two numbers without remainder)  $28 = 2 \times 2 \times 7$   $42 = 2 \times 3 \times 7$  The HCF of 28 and 42 is given by  $2 \times 7 = 14$

### Use the distributive property to express 28 + 42

Play this game to review Basic Operations. What is the Distributive Property? Preview this quiz on Quizizz. What is the Distributive ... 10 Questions Show answers. Question 1 . SURVEY . 120 seconds . Q. What is the Distributive Property? answer choices . For any numbers a, b, and c,  $a(b + c) = ab + ac$  . For any numbers a, b, and c,  $a|b + c ...$

Use the Distribution Property to Expand Algebraic Expressions. a, b and c being real numbers. The distribution property is given by:

### Use of the Distributive Property in Algebra - Grade 6

Solution for 6. Use the distributive property to simplify:  $3(5x-8y)$  [A]  $15x-8y$  [B]  $15x+24y$  [C]  $5x-8y$  [D]  $15x-24y$

### Answered: 6. Use the distributive property to... | bartleby

Suppose x, y and z are elements of a set and # and - are two binary operations defined on the set. Then, the distributive property of # over - states that for all elements x, y and z in the set,  $x \# (y - z) = x \# y - x \# z$  A common example is # = multiplication and - = addition (or subtraction). In that case, the distributive property of multiplication over addition states that  $x*(y + z) = x*y + x*z$

### How does distributive property work? - Answers

Image Transcriptionclose. Use the GCF and the Distributive Property to find the sum.  $42+66$  Write each number as a product using the GCF as a factor, and apply the Distributive Property.  $42+66 =$  (Use the operation symbols in the math palette as needed.
