"An exercise stress test is not 100% accurate—no medical test is," Dr. Bhatt says. "But it helps decide what the next step should be." What is a stress test? In a stress test, you walk on a treadmill that makes your heart work progressively harder. An electrocardiogram (ECG) monitors your heart's electrical rhythms.

Cardiac exercise stress testing: What it can and cannot ...

An exercise ECG is done to assess the heart's response to stress or exercise. In this test, the ECG is recorded while you are exercising on a treadmill or stationary bike. An ECG tracing will be taken at certain points during the test to compare the effects of increasing stress on the heart.
