Many solvents and harsh chemicals can damage plastics. To clear away residue safely, first use warm, soapy water and rub the residue firmly. If this was not successful, try vinegar, which offers a powerful clean without any detrimental effects on plastic. Labels and glues can leave behind gunky adhesives on plastic.

## **Adhesive Technologies**

Generally, a solvent is a liquid that is either a single chemical or a mixture of chemicals used to dissolve a substance or material. This property allows solvents to be used as cleaning agents, or in chemical manufacturing, or as ingredients in other products. 2. Common uses of solvents include: • Industrial cleaning and degreasing;

## **Solvents in the Workplace**

In summary, water-based adhesives form bonds when the water inside evaporates. They are better for short-term use and are more environmentally friendly. In contrast, solvent-based adhesives form bonds when the solvents inside evaporate, and they are more durable and chemical resistant.

## **Stuck on the difference between solvent-based and water ...**

Adhesives and glues are liquid substances that hold materials together and prevent separation after drying. They often form a permanent bond. Industrial adhesives and glues help to provide additional reinforcement for building materials, such as threaded rods anchored in concrete, or subfloor nailed to floor joists.
