On Immunity An Inoculation

On Immunity is an inoculation against our fear and a moving account of how we are all interconnected-our bodies and our fates.

On Immunity: An Inoculation: Biss, Eula: 9781555977207 ...

On Immunity: An Inoculation. Upon becoming a new mother, Eula Biss addresses a chronic condition of fear--fear of the government, the medical establishment, and what is in your child's air, food, mattress, medicine, and vaccines. She finds that you cannot immunize your child, or yourself, from the world.

On Immunity: An Inoculation by Eula Biss

On Immunity is a mother's perspective on vaccination; a dive into whether it's a good idea to immunize your children, and whether vaccines "immunize" them at all. She goes into (well balanced, I thought) detail about the benefits and perils of medicine.

Inoculation is a set of methods of artificially inducing immunity against various infectious diseases.The practice originated in the East before being imported to the Western world.The terms inoculation, vaccination, and immunization are often used synonymously, but there are some important differences between them.

Inoculation - Wikipedia

Contributions to this bank are donations to those who cannot or will not be protected by their own immunity. This is the principle of herd immunity, and it is through herd immunity that mass vaccination becomes far more effective than individual vaccination." — Eula Biss, On Immunity: An Inoculation 10 likes

On Immunity Quotes by Eula Biss - Goodreads

Immunity and Immunization According to the World Health Organization (WHO), "immunization is the process whereby a person is made immune or resistant to an infectious disease, typically by the administration of a vaccine. Vaccines stimulate the body's own immune system to protect the person against subsequent infection or disease."

The Difference Between Immunization and Vaccination

The bad news for adults is that the BCG inoculation is normally given only in early childhood when interference from other infectious diseases has yet to afflict the immune system. Another negative factor in warmer climates is immune reactions to other types of mycobacteria in the environment, which reduces the impact of inoculation, often down to zero.
