Percutaneous Laser Disc Decompression A

Approved by the FDA and recognized by the AMA, Percutaneous Laser Disc Decompression (PLDD) is a minimally invasive laser treatment performed on an outpatient basis using only local anesthesia. During the procedure, a laser beam vaporizes a tiny portion of the disc, decompressing it. Patients typically get off the table and go home.

Percutaneous Laser Disc Decompression: Who Should Consider ...

The Percutaneous Laser Discectomy is used in this unit to remove broadbased disc protrusions. Our experience indicates that a KTP/532 laser

...

Percutaneous laser disc decompression (PLDD) is a procedure that Florida Surgery Consultants can offer thanks to the experienced team of board-certified neurosurgeons on staff. This is often used to treat patients suffering from severe herniated discs (bulging disc in the spine). PLDD relieves (decompresses) pressure inside the disc and reduces the bulge.

Percutaneous Laser Disc Decompression (PLDD)

Percutaneous laser disc decompression (PLDD) is a method of relieving pressure on nerve roots in the spine, such as from

Crutch herniated discs. Compressed nerve roots can cause pain, tingling, numbness, weakness and other symptoms in the back, neck, arms and legs. Instead of surgically removing the source of the compression, laser disc decompression works by using laser energy to destroy it.

Laser Disc Decompression - Edison Spine Center

Percutaneous laser disk decompression (PLDD) is one of the so-called “minimally invasive” treatment modalities for contained lumbar disk herniation. The treatment is performed percutaneously, so morbidity is expected to be lower and convalescence period is postulated to be shorter than for conventional surgery.

Percutaneous Laser Disk Decompression: A Review of the ...

Percutaneous laser disc decompression (PLDD) for patients with lumbar disc herniation is believed to be cheaper than surgery. However, cost-effectiveness has

never been studied. Materials and Methods. A cost utility analysis was performed alongside a randomized controlled trial comparing PLDD and conventional surgery.

Percutaneous laser disc decompression versus ...

Percutaneous disc decompression uses a minimally invasive catheter to create an accurate 1 mm pathway into the disc. To perform percutaneous disc decompression, also referred to as Nucleoplasty, a micro-engineered alloy transmitter is inserted into the disc while the patient is awake. This requires only a topical anesthetic and light sedation.
